

CPF25 Family

ChargePoint® Level 2 Charging Stations

The CPF25 family brings ease of use, convenience, safety and reliability.

Our CPF25 family of charging stations is designed for select fleet and multi-family applications. For fleets, CPF25 stations are ideally suited for depot charging. For multi-family communities, CPF25 stations are ideal for personal charging in assigned parking spots.

All CPF25 models are Level 2 charging stations that can add up to 25 RPH (miles of range per hour) and are capable of charging some EVs in less than four hours. The stations come with a standard SAE J1772™ connector that can charge any EV on the road.

Intelligent energy management capabilities can lower both installation and energy costs. Capabilities such as scheduled charging can reduce monthly operating costs, and panel sharing can help you charge more cars while avoiding expensive electrical upgrades.

Stations are available in wall and pedestal mount configurations with 18' and 23' cord length options. You can keep cords off the ground and avoid trip hazards with our self-retracting, maintenance-free cord management system.

Maximize the Benefits of EV Charging with Smart, Networked Stations

- + Receive automatic software updates that continuously deliver new improvements and features
- + Remotely monitor, manage and configure stations from a single ChargePoint login
- + Get real-time information on station availability
- + Get detailed reports on energy usage, fuel savings, greenhouse gases avoided and more
- + Restrict access to approved driver(s)/vehicle(s) with RFID card reader
- + Locate stations, see station availability, track charging and more while on the road with our mobile app

Service Products and Support

ChargePoint offers world-class service products and support for your drivers, station owners and charging stations.

- + 24/7 driver phone support
- + Dedicated station owner support
- + Parts and on-site labor maintenance

Pedestal Mount and
Cord Management Kit

Energy Measurement

- + Real-time energy measurement
- + 15-minute interval reporting

Minimize Costs with Energy Management

Our flexible energy management options can help lower your installation and energy costs while providing an optimal charging experience.

Scheduled Charging and Demand Response

- + Allows you to plug in vehicles and schedule stations to start charging during off-peak hours when electricity rates are the lowest
- + Reduces monthly electricity costs by shifting EV charging to off-peak hours and avoiding demand charges
- + Load shed by percentage of running average or to fixed power output

Panel Sharing

- + Allows you to charge more EVs without costly electrical upgrades
- + Intelligently and dynamically distributes power output to all EVs that are plugged in

Power Select

- + Allows for a lower capacity (less than 40A) circuit to power each port

Power Sharing

- + Allows dynamic sharing of one 40A circuit between two parking spaces
- + Doubles the number of parking spots served while reducing installation and operating costs
- + Lets station owners upgrade from a single station to a dual-station configuration to serve more drivers without electrical upgrades

Clean Cord Technology

- + Ultra-reliable gravity-operated mechanism
- + Flexible over entire -40°C to +60°C (-40°F to +122°F) product temperature range
- + Available on select models

Safe and Reliable Hardware

- + UL listed, meeting the stringent requirements of the nation's leading safety standards organization
- + Stations are rugged, built to withstand the elements
- + Type 3R enclosure offers the flexibility to install stations outdoors or indoors
